### Student Comments

**What did you find MOST helpful about Josemari Feliciano's teaching approach and course content?**

Comments
Practical Insights and Data Science Industry/Field specific expertise
Professor Feliciano was very helpful inside and outside of class. He gave a real effort towards making sure no matter what background you have in the content you felt like you were learning.
He posted slides with clear directions on coding and helpful class material. He was flexible and gave you all the tools needed to code in R well.
Dr. Josemari has been on top of the course content.
He is a proactive professor, he goes beyond the actual textbook and expresses the ethics and principles of what a data scientist needs to do in an industry. His slides were easy to follow and learnt from doing the exercises in class. Furthermore, he is willing to discuss topics related to data science outside of the classroom, especially during office hours.
Lecture & lab combination allowed for in-class utilization of material
I loved everything about the class and professor. The online textbook was accessible, relevant, and easy to navigate, but I never really had to do the readings because the lecture slides, practice problems, and homework covered the course content very well. I really like classes whose grade weights are only comprised of homework and exams because I feel that students get the most out of STEM subjects from consistent practice. Lastly, the professor made great use of the Canvas page; it has all the resources a student needs with different versions and formats. He uploads files and grades in a good time frame.
He took the time to explain all topics in an easy manner to understand. There were hands on approaches that made applications easy as well as homeworks.

Comments
Nothing to mention. I cannot think of any other better introductory courses on R.
N/A
Nothing, I just wished that there was no Tues classes closure, apart from national holidays, because he didn't have a chance to cover a topic we voted that we were interested, like maps. But, thankfully, he sent extra resources after class to learn more about the tidyCensus package.
N/A
Absolutely no complaints. He was extremely responsive to the mid-semester suggestions students made for the class.
